General information

A high quality thermoplastic elastomer (TPE) with SEBS (styrene-ethylene/butylene-styrene) molecule structure. A flexible and recyclable material and a good alternative for PVC or natural rubber in terms of environmental impact. The hardness matches Shore 70A. SEBS is resistant to many chemicals except petrol and burns after lighting. It can be applied in a wide temperature range, has reasonably resistant to weathering and is applied a.o. in the electronics and automotive industry.
